# CORREVON-AMERICAN

BRIDGEBORO, NEW JERSEY

The seeds offered in this list are available, subject of course to previous sale, in Correvon Fils original packets as received direct from the Correvon Floraire Nurseries in Switzerland during 1942 and in late autumn of 1941. They are harvest of 1941, that is one year older than seeds of the latest harvest, which would be that of 1942. We think most of them will grow; they should, for of most things seeds one year old will grow almost as well as will new ones, and in a few kinds even better. No guarantee, though. This may be the last time that we shall be able to offer some of these sorts until the war is over, for it is becoming increasingly difficult to import seeds, and several lots sent from Correvon Fils in Switzerland during the last year have been lost in transit, and likely now are feeding the fishes. Stocks of some of the kinds listed below are small, in certain instances very small. In connection with that, won't you please when you order give a short alternative list from which we may choose in case any of the varieties you particularly wish happen to be sold out. That will save time and correspondence, and in these days that is really important.

About new seeds, those of 1942 crop, we are hoping that some will get across to us from Correvon of Switzerland. Can't be sure of it, though. If any do, we will strike off a list of them, and send it to those who may wish it. If that includes you, tell us so, and we will then enter your name and address on the special register of those who want lists of Correvon seeds whenever fresh arrivals permit offerings of them.

Please remit by postal order if you can, but if that is not convenient, send your personal check, adding then ten cents to total sum to cover record and collection costs, or you can send actual currency if you will register the letter. Send all orders to

## SPECIAL OFFER OF OLDER SEEDS

We have just a few packets each of several hundred kinds that are one year older than those listed above, crop 1940 instead of crop 1941. There are many rare kinds included, and a lot of them may be unobtainable for a long time to come. Some of these seeds won't grow now, but a very considerable number of them are still viable. All are in original Correvon packets as received from Switzerland. Average original price was around 23¢, that is the actual average of 100 of the kinds taken at random. It is impracticable to list them separately. We offer them only in collections at this rate:

10 pkts. for 50¢; 25 for \$1.00

Strictly our choice of varieties, each one different, but we won't select any kind on your order from the above list.
